

mongoengine::Document

```
classDiagram
    class mongoengine_Document["mongoengine::Document"]
    class memoryoracle_execution_Commit["memoryoracle.execution.Commit"]
    memoryoracle_execution_Commit --|> mongoengine_Document
```

The diagram illustrates an inheritance relationship. At the top is a class box for 'mongoengine::Document', which is divided into three horizontal sections: the top section contains the class name, and the two bottom sections are empty. Below this is a class box for 'memoryoracle.execution.Commit', which is divided into three horizontal sections: the top section contains the class name, the middle section contains the attributes '+ vcs_hash' and '+ executables', and the bottom section is empty. A blue arrow with an open triangular head points from the top of the 'memoryoracle.execution.Commit' box to the bottom of the 'mongoengine::Document' box, indicating that 'memoryoracle.execution.Commit' inherits from 'mongoengine::Document'.

memoryoracle.execution.Commit

+ vcs_hash
+ executables
