

migrations::Migration

```
classDiagram
    class migrations_Migration["migrations::Migration"]
    class memoryoracle_migrations_0006_program_path_Migration["memoryoracle.migrations.0006_program_path.Migration"]
    memoryoracle_migrations_0006_program_path_Migration --|> migrations_Migration
```

The diagram illustrates an inheritance relationship. The base class, 'migrations::Migration', is shown in a white box with a black border and is divided into three horizontal sections. The top section contains the class name, while the two bottom sections are empty. The derived class, 'memoryoracle.migrations.0006_program_path.Migration', is shown in a gray box with a black border and is also divided into three horizontal sections. The top section contains the class name, the middle section lists two attributes: '+ dependencies' and '+ operations', and the bottom section is empty. A blue arrow points from the top of the derived class box to the bottom of the base class box, indicating the direction of inheritance.

memoryoracle.migrations.0006
